SPECIFICATION

In paragraph 0089, (pg. 35, line 18) and after "...; or anywhere else desired.", please insert the following:

In another embodiment of the invention, a temperature sensor determines the temperature inside the wash chamber and can adjust the temperature to ensure that the temperature does not exceed 30°F below the flash point of the working fluid working fluid unless the concentration of said working fluid does not exceed its lower flammability limit.

In paragraph 0147, (page 61, line 22) after the last sentence which ends "...a fabric washing application.", please insert the following sentence:

In one example embodiment, the method of cleaning comprising the steps of selecting a substantially non-aqueous working fluid; selecting at least one washing adjuvant; placing the fabric in a chamber adapted to confine said working fluid and said fabric; bringing said working fluid and adjuvant in contact with the fabric in the chamber, by introducing a water-in-working fluid emulsion into the chamber; and applying mechanical energy to provide relative movement of said fabric.
